Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

The response filed on 08-06-2004 as a result of a restriction requirement has been noted. The Applicant has elected claims 1-6 without traverse.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacGillivray U.S. Patent 4,275,686.

MacGillivray teaches a horse exerciser drive mechanism which is structurally similar to the Applicant's claimed apparatus. The device includes a motor or drive mechanism 3, a controller or speed control switch 16 and an animal sensing mechanism or human that detects an animal and determines whether the animal is of a first or second type. A human can manipulate the switch to vary the motor speed. Regarding claims 3 and 4, MacGillivray does not specify revolutions per minute as claimed. However, in column 4, last two paragraphs, by adjusting nut 29, the total speed reduction ratio can be infinitely adjustable. Further, one of ordinary skill in the art at the time the invention was made can vary the revolutions per minute to various speeds, even speeds as claimed, depending on the animal being trained. In regards to claim 5, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use

Art Unit: 3643

the device to exercise a variety of animals not just horses. As for claim 6, MacGillvray does not discuss the use of a wireless interface coupled to the controller. However, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the wiring apparatus of MacGillvray with a wireless interface, in order to control the speed from a distance instead of stopping the device each time the speed needed to be adjusted.

Allowable Subject Matter

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art of Record

The prior art of record show similarly animal exercising devices in which the motor speed can be adjusted depending on the animal using the device.

Conclusion

Summary: Claims 1 and 3-6 are rejected.
